

Public Engagement Summary for Develop Phase

SUMMARY OF COMMON FEEDBACK THEMES

- ♦ **Property-specific comments.** Many conversations were had with property owners near the corridor.
- ♦ **Support for pedestrian improvements.** Some participants expressed support for the proposed pedestrian underpass, noting it would improve safety for people crossing Dodd Boulevard.
- ♦ **Questions about park layout and trail alignment.** Several comments and questions focused on the proposed walking path alignment through the park. Participants asked about how the path would function in relation to existing park uses, including athletic activities, and whether alternative alignments were being considered. A number of comments expressed a preference for maintaining the existing path alignment rather than introducing a new route through the middle of the park, citing concerns about park usability, privacy, and the overall neighborhood character.
- ♦ **Traffic and circulation questions.** Attendees raised questions related to how traffic would move through the area, including connections to downtown and overall circulation patterns.
- ♦ **Noise and visual considerations.** Concerns were raised about potential noise impacts associated with roadway changes and the effectiveness of landscaping or berms in providing noise reduction. Some comments also referenced maintaining or enhancing landscaping to help preserve existing neighborhood conditions.

A 4.5-minute visualization video was developed to illustrate what the completed project could look like once constructed.
